Demand Position or Project	The production and sell of Audi C7 Girvac II booster		Position Requirements or Project Introduction	<p>The company introduces the UK's Lucas proprietary technology, with the car front and rear brake caliper assembly, vacuum booster with master cylinder assembly, and an electronic parking brake as the main products. In 2010, the company received new projects of FAW-Volkswagen Audi C7 Girvac II booster. The design has been optimized in the number of parts, and thus make the assembly process simplified, which is an innovation in booster product. The optimized design also helps to lower costs, and makes our products more competitive in price.</p> <p>In production, the company plans to add some new workstations, fixtures and gages on the basis of existing production line to meet the needs of the project.</p>	
Task Description	<p>The goal of this year is: The foreign experts should be ready. We have to enhance training, improve staff awareness of quality, check on the quality system strictly, and keep the risk of quality problem in a very low level. In order to meet customer demand, optimizing production capacity, and improve efficiency, we have to do a good job in preventive maintenance of equipment, and reduce downtime to reach the maximum of capacity. The assembly and test equipment is electrical and mechanical equipment which will be used in a safe environment and comply with the relevant laws and regulations made by government departments to develop environmental and safety. The laws and regulations include the aspects of waste oils, suspensions, waste water, emissions, smoke and noise handling</p>

Demand Position or Project	1. Senior research personnel 2. GMP specialized personnel 3. Senior marketing or technical personnel		Position Requirements or Project Introduction	1. Be Familiar with the project of NDA (New Drug Application), modifying technics application, new drugs clinical trials and marketing planning. 2. Be filled of rich experience and human relationships. 3. Clear written and oral language skills, excellent analytical skills and problem-sovling skills.	
Task Description	<p>Senior research personnel: 1. Responsible for the offering and implementing of the product development plan;</p> <p>2. Leading and managing a research group developing new products with new preparation technology. The new development includes establishing products, developing, enlarging and registering formulas, as well as improving the manufacturing technology.</p> <p>Senior marketing personnel: 1. Responsible for selling drugs business, attracting investment inside and outside the country, managing the products process and signing and implementing the contract.</p> <p>2. Responsible for developing the business on pharmaceutical preparation.3. Responsible for organizing business team, taking part in the team construction and whole management, promoting the construction and perfection of each management rules and constitutions. Technicians: Relevant work on quality testing, technics, inspection, equipments, development etc.</p>				

Basic conditions of attracting talents				
Major	Educational Backgroud	Post	Person	Age
Pharmacy, Pharmaceutical Engineering and Chemical Industry	Above Bachelor Degree	Project Manager or Pace-setters	2	35-50 years old
Equipments, Marketing and Business Management	Above Bachelor Degree	Department Manager	5	35-50 years old
Pharmacy, Pharmaceutical Engineering, Chemical Industry, Biology, Instrument and meter, Equipments, Computers, Electromechanical Integration, Polymer Material	Above Bachelor Degree	Technicians	20	24-35 years old
Material Benefits provided for the talents				
Allowance or Project Subsidy	Workplace	Housing	Placement of family members	
RMB 2000-3000/month, 5 insurances and public holidays	Cangzhou City	provide	provide

Demand Position or Project	The gravity of the reactor equipment integrated technology research cooperation		Position Requirements or Project Introduction	<p>The process are going to adopt the new reaction equipment main characteristic is by the gravitational theory to realize the reaction products in the whole process of separation and the effective integration, minimize side effects from NiFanYing; Second, the realization of the complete counter-current mixed evenly reaction, reduce to mix area and eddy current area, and the overall improve reactor efficiency; Third, by the gravity process chromatography and refining, realize diesel and glycerin in separation, the maximum reduce energy consumption; Fourth, reduce alcohol consumption process, reduce production cost; Fifth, cancel water washing, layered process, reduce water consumption and pollution and raise productivity</p>	
Task Description	<p>Through cooperation with foreign experts mainly realizes the following technology research: first, the rationalization process equipment and computer mathematics theory modeling process simulation; Second, overweight force field simulation flow field parameters quantitative simulation; Third, overweight force field equipment technology; Fourth, layered materials produced structure and technology implementation; Fifth, equipment dynamic balance processing. Sixth, biomass diesel test production; The seventh, finalize the design and product testing; Eighth, similar to the contrary to all should be the popularization and application of the process.</p>				
Organization and cooperation Intention of foreign experts and department

Demand Position or Project	China's new energy and the valley of electric energy equipment industry		Position Requirements or Project Introduction	Baoding high-tech zone after DuoNian development, has already become new energy and energy equipment industry as the characteristics, to software, new materials, biological pharmaceutical industries for the supplement of the high and new technology industry system. Form the photoelectric, wind power and power saving, store the electricity, power transmission and transformation and power automation equipment and so on six big industrial cluster and relatively complete system of new energy industry. In 2006, baoding municipal party committee and the city government put forward based on baoding high-tech zone to build the "China electric valley" strategic idea, makes the Chinese renewable energy industry equipment the nationalization of the demonstration base.	
usTask Description	(1) to implement the implementation of "national long-term plan for science and technology development (2006 2020) > some support policies of" (the country is sent [2006] no. 6), to the country to declare major projects, carry out special funds as a whole. (2) channels for different national, provincial and municipal policy, capital support "China electric valley" in key projects, the key technology and major equipment and for the research and development of enterprise technology innovation service system construction and talent introduction work. (3) set up a "China electric valley" development support funds. Used for "China electric valley" in the national key project of the industrialization of the supporting funds, major, key technology research and development fund, to attract top talent venture fund, foundation platform and environment construction funds, and the outstanding contribution award. (4) establish BaoDingShi "China electric valley" technology innovation fund. Used for "China electric valley" enterprises establish engineering technical center and the development of new products, new technology and new process of the costs.

Demand Position or Project	Liquid crystal glass substrates of complete sets of equipment production line		Position Requirements or Project Introduction	As TFT-LCD TV panel technology innovation and breakthrough, and obviously improve the quality LCD TV, LCD TV market and into the rational development of rapid growth. Inevitably, CRT display will gradually exit, liquid crystal and even updated display technology will instead, the current domestic, Orient the company is the only one has the r&d and manufacture glass substrate to finished product ingredients from the kiln glass package of the whole equipment production line experience and the ability of equipment manufacturing enterprise and wide prospect of market. At present, the ongoing LCD glass substrates of complete sets of equipment production line design, manufacture, and the next step is completed the construction G4.5 generation, and the improvement of production line G5 products and finalize the design work, at the same time r&d G6 and G6 above tft-lcd glass substrate complete technology and equipment technology.	
Task Description	Project belongs to the intensive capital and technology project, industry XianRuZhe set technology barrier, because we are involved in tft-lcd glass substrate manufacturing industry time no foreign company for a long time, it is not in the industry technology brand advantages, XianRuZhe unavoidably been stopped in the downstream from technology to set up process obstacles. Through the engineering work, solve G4.5, G5 generation and G5 generation above LCD glass substrates of complete sets of equipment in the production line of the overall design, process of production process and management in the production line of the followup improvement work. 2009 Orient company in zhengzhou, chengdu, shijiazhuang each invest construction LCD glass substrate production line, talent reserve and independent technology is the foundation of the long-term development of the enterprise. This year's perfect construction in the improvement of production line and finalize the design product, develop the advanced technical talents and management personnel, improve the technology research and development ability is the company's efforts to target.				
Organization and cooperation Intention of foreign experts and department

Demand Position or Project	Glowing tube spraying technology applied in special lighting		Position Requirements or Project Introduction	Glowing tube spraying technology means to evenly spray the alumina powder and thinner according to the certain proportion on the bottom of the tube lighting glow to form a layer of oxide film on the quartz tube around the electrode in the glowing tube. This layer of oxide film can prevent the temperature of the bottom of the glowing tube from raising. Thus the sodium(Na), cesium iodide, mercury and other rare metal compounds in the glowing tube can have a better circulation. And it can also improve brightness and prolong life.	
Task Description	To build the glowing tube spraying product line To satisfy the needs of consumers from Asian and European countries; to improve the quality To try and process in strict accordance with the principle of safety and environmental protection

Demand Position or Project	Producing 5MW a-Si thin film solar modules annually		Position Requirements or Project Introduction	<p>The a-Si thin film solar module is the new field of energy resources that our country prioritized recent years. It is widely used in many aspects of the national economy. Nowadays there is a wide gap between china and foreign countries on the aspects of techniques and crafts. Both the practical production and the laboratory data indicators of foreign countries are superior to those at home. Considering the present situation, Fengfan Solar Energy CO.,LTD on the one hand brought in the advanced technology and equipments from foreign countries, on the other hand invited the senior technicians from internationally advanced companies as instructors in the studies of techniques, equipments, crafts and so on. Thus Fengfan can make full use of their existing knowledge and experience and conduct the projects soundly and effectively. So far, the single machine commissioning of the whole production line has been finished, and the pro-cyclical debugging of the production line equipment is in progress.</p>	
Task Description	By introducing the high-end technical personnel, these problems can be solved: 1.to grope for and ascertain the production process parameters; 2. to improve the manufacturing techniques; 3. to optimize the product performance index; 4. to test and apply new technology; 5. to foster the technical team. The main task is to grope for and ascertain the production process parameters, to product the qualified productions and to satisfy the markets.

Demand Position or Project	Reaction-bonded SiC Ceramics	Position Requirements or Project Introduction		<p>The advanced Reaction-bonded SiC Ceramics has high strength, high-thermal conductivity and is resistant to wear and corrosion. It has been widely used in ceramics, environmental protection, metallurgy, chemical industry, the arms and other industries in developed countries. At present, in China, this advanced high density Reaction-bonded SiC Ceramics remains blank. The German company FCT occupies the leading position in the area of Reaction-bonded SiC Ceramics in the world. Once this technique is introduced, the gap between our country and other advanced countries will be immediately narrowed. When used in ceramics as the refractory materials, especially when it is used in bulletproof armor it can save resources significantly.</p>	
Task Description	1. On the basis of paying enough attention to scale production, stabilize the product density to make it achieve the international advanced level. 2. To solve the adhesion problem of products during sintering process and improve the qualified rate.

Demand Position or Project	Research on compound ground source heat pump technique		Position Requirements or Project Introduction	Compound ground source heat pump technique focuses on an efficient air condition heat pump with the soil as heat source. The appliance mainly includes underground pipes, ground heat pump set, solar energy auxiliary heating system, cooling tower auxiliary cooling system and ground air condition system. In summer, heat pump set offers 'cold water to the building to meet the needs of air condition and at the same time passes the heat to the outside and underground through the pipes and cooling tower. In winter, the heat collected from the soil and solar energy through underground pipes and solar thermal collector is transferred to the building by the heat pump set. In this way, the compound ground source heat pump can cool and heat the building all year round which is a efficient and environment friendly air condition technique.	
Task Description	With coupling the characteristics of the load of air condition of buildings, heat pump set, underground pipes and solar energy auxiliary heating and cooling system, a strategy to optimize and control the compound ground source heat pump is put forward. The coefficient of performance of the system in summer is over 3.5 and in winter is over 3.0. Besides, it's more energy- efficient than the traditional cold/heat source of air condition which leads to further application and dissemination.				
Organization and cooperation Intention of foreign experts and department

Demand Position or Project	Research and development of localizing coating system of the high-speed passenger rail		Position Requirements or Project Introduction	<p>The development ideas of our high-speed rail project is "introduce advanced technology, design and produce jointly, build Chinese brands" At last to gain independent intellectual property rights of the ultimate high-speed passenger vehicle manufacturing technology. Coating system is an important part of vehicle manufacturers, and its core technology lies are handled in several European well-known paint manufacturers. There is no national coating technology which can meet the demand of speed passenger above 300Km / h, thus we are still fully dependent on imports. Based on this situation, our company contacted with Austrian Lanmu Deng paint company, which has the qualifications, technology and experience we need. After a period of exchanges and contacts, their manager, Mr. Bazar came to our factory to negotiate with us. Both sides want to speed up with the progress and step into the real operation as soon as possible.</p>	
Task Description	1. Transfer the key technologies, and provide technical product formulations. 2. Personally guide our factory engineers to test the technology for digestion and absorption. 3. Help find the recipes of relevant materials and provide information of foreign raw material suppliers. 4. Help solve the problems in the localization of raw materials. 5. Help solve construction problems. 6. Provide appropriate help to promote products to the international market.

Demand Position or Project	High brightness shine diode(LED)		Position Requirements or Project Introduction	<p>As a new semiconductor light source, LED reflected advantages in three aspects: energy conservation、environment protection and long lifetime. LED's Energy Consumption accounts for 10% of Incandescent Filament lamp and 50% of Fluorescent Lamp.</p> <p>If all of the world use LED lamps for lighting, they would save three times energy generated from The Three gorges reservoir. The product of LED is packed in solidity and has Stable structure. The lifetime of LED can be about 100,000 hours, which is 10 times of Fluorescent Lamp, 100 times of Incandescent Filament Lamp.</p> <p>In the field of environment protection, instead of Incandescent Filament Lamp and Fluorescent Lamp, using LED doesn't need to use glass vacuum encapsulation and can also avoids the pollution of poisonous gas and mercury. Due to the outstanding performances in energy-saving, semiconductor lighting become the most fascinating industry in the 21st century. We are going to introduce the technique of Jinyinggao lab, who has the core technology and top specialists about super-high light intensity.</p>	
Task Description	In 2011, we will carry the work of installation、adjustment、training workers and trial production. Then we will endeavour to bring into production regularly in May of 2012.The project needs to introduce talents in terms of installation and training of operatives. The talents we introduce would solve the problem of key technology in installation and adjustment in order to guarantee the equipment work normally and ensure smooth production.

Demand Position or Project	The introduction of technology of localization of cog, rail and System track		Position Requirements or Project Introduction	<p>The localization of cog, rail and System track is one of the projects which are in progress cooperated by SMT Scharf Group in Germany and Qinhuangdao Hongding Light Industry Machinery Co., Ltd. The trial samples have already served to Germany. SMT Scharf Group in Germany is technology-leading expert in rail transport system, comprehensive technical knowledge, global visibility, high-performance products and the accumulation of many years of experience in solving a variety of transport problems makes it enjoys high reputation in mining, tunneling and other types of industries. The localization of orbital can greatly reduce the cost of investment to introduce rail in China, and also help to improve China's technological level in the manufacturing of rail transportation equipment</p>	
Task Description	<p>This project needs to introduce technology of cog, rail and System track, and also needs on-site technical guidance by the German experts, thus our technical staff can master the technical content, so that they can guide the production process. This year, we plan to produce cog, rail and System track for 3000m and use it in the domestic coal projects matched with the production of SMT Scharf Group in Germany.</p>

Demand Position or Project		Position Requirements or Project Introduction	Hook is the most commonly used spreader in lifting, and it has a very wide range of applications. The multi-purpose hook this project intends to develop has the features of unique, innovative, high quality, and safety, and it can used in factories, mines, petroleum, chemical and marine terminals, etc. It has high safety factor and a lifting range from 5 tons to 150 tons. My company decided to develop this project in order to enhance our competitiveness in international markets, open up international markets in an all-round way and achieve the enterprise's multi-channel, cross-cutting development. And at the same time, through this project, learn from foreign advanced manufacturing technology, to enhance digestion and absorption and development of innovative, so as to improve our technical level of research and development.		
Task Description	This project needs the introduction of foreign experts, and to solve current shortcomings of our products by discussion, and R & D with foreign experts in the technology of multi-hook. This year we plan to complete the design of multi-purpose hook, and at the same time make good preparation for the trial production.

Demand Position or Project	The research and development of energy saving and environmental protection wall-hang gas boiler		Position Requirements or Project Introduction	At present the traditional heating style in our nation exists many problems like air pollution, which fails to meet the modern consumption need. Our company observes that the area of energy saving and environmental protection wall-hang gas boiler is bland in the domestic market. Thus with the support and aids of 'the relative departments, we decided to research and develop this project. We invest 14010000yuan, among which the construction investment is 12180000yuan and initial working capital 1830000yuan. The project will realize sales revenue of 62000000yuan per year after a full construction, and the profit tax amount will reach 6000000yuan. Meanwhile, the project will fill in the blanks part of our economy, and lead the promotion and development of heating industry.	
Task Description	Through cooperation with Mr. Zhou Mingyue of foreign nationality, we hope that our company will improve the combustion efficiency with energy saving and environmental protection wall-hang gas boiler. In this way, we can improve the key technology of electronic circuit, reduce the proction cost, better the emission of the harmful gas like carbon monoxide, reduce the air pollution, to improve both economic and social efficiency. The project will be fully finished in December 2011.

Demand Position or Project	Composite type impact testing machine	Position Requirements or Project Introduction	Composite Type Impact Testing Machine is used for testing the resistance capacity, judging the brittleness and toughness of the plastic materials. The toughness of the plastic materials is an extremely important indicator in the project application, which reflect the anti-damage capacity of different materials when facing with high-speed impact. The machine provide testing service for plastic products and raw material production, assures the safety of the products quality. At present, there are mainly types of testing according to the international standar: Charpy Impact Test and Izod Impact Test. The machine realize the unification of the two tests, which makes the operation more convenient and prevents the mistakes caused by manual operation.		
Task Description	1. solve problems like complicated production debugging, highly technological demand for the workers, low reliability 2. solve problems like: impact pendulnm are mostly non-standard pendulum model which has high windage, low toughness, and frequently impact the machine and make it useless.				
Organization and cooperation Intention of foreign experts and department

Demand Position or Project	The introduction of sewage purification technology of Russia's integration module		Position Requirements or Project Introduction	Yongqing is an agricultural county. With the gradual transformation of the economy pattern and the deepening of industrial development, the enterprises represented by Da Tian, Nan Bo, Gao Bo grow rapidly. However, sewage discharge is increasing day by day. Although the Government applies the sewage treatment facilities with great effort, it is not very effective. In order to better promote the sustainable economic development of Yongqing, we plan to introduce the Russian integrated modular sewage purification processing technology to improve the ability of sewage treatment of local companies and to invite experts of Russia to come to Yongqing for technical guidance.	
Task Description	Through the introduction of foreign advanced wastewater treatment technology, we will mainly solve the problems of local businesses' dealing with sewage purification and realize the aim of recycling of industrial wastewater. To make the indicators of sewage discharge of Trial enterprises better than the national standard of GB18918-2002 level A.

Demand Position or Project	Radio remote control technology R & D and cooperation		Position Requirements or Project Introduction	<p>It is the latest high-tech project which uses the wireless technology, makes data transmission via GPRS technology and to achieve the data control and remote control of excavator. Construction Machinery remote monitoring and management system: The system takes service management center which can be interconnected to the information and the airborne terminal which installs on mechanical equipment as the core, using the global positioning satellite (GPS) technology and the extended GSM wireless technology, through technology methods such as data collection acquisition, real-time control, GIS geographic information systems, information security technology to realize remote monitoring, remote control, remote management capabilities, can provide real-time remote machinery condition information.</p>	
Task Description	<p>Learning of the advanced technology and experience from foreign industry, the introduction of advanced research equipment, solution of the signal interference of products, stability of products in various environments, shock resistance, the signal intensity processing, the complexity of the algorithm, real-time communication technology and the key breakthrough on them. Function has been further improved and can be adapted to harsh environments. Complete early development of the 805-9 series, follow-up technical problems need to be solved by experts.</p>				
Organization and cooperation Intention of foreign experts and department

Demand Position Project or	to establish nationwide health information network	Position Requirements or Project Introduction	<p>Speeding up the informatization process is a necessity of health care reform and development. On the basis of establishment of the basic medical insurance system covering all citizens, the nationwide health informatization network is aiming at building a three-level medical informatization network which includes the necessary infrastructure with good function and perfect service, by making city as the center, town (district) as the pillar and the country (community) as the basis. As we put the medical record as a center and set the standard data interface among the hospital, the medical service community, the relevant management department and the third system, we can achieve such goals as information sharing, medical resources integration and management, as well as effective supervision and control of medical information of the city by the government. Consequently, we can resolve the problem of expensive medical bills and difficult access to quality medical by maximizing the social effect of limited medical resources.</p>		
Task Description	<p>Through importing advanced medical informatization technology and platform, we would build a new medical service model with an open, rapid, and economic information sharing. At the same time, we would establish a three-level medical service network in the country, with the management of the medical record as a center, the general practitioner workshop system as a connector. Then, we could get the scientific data of all kinds of chronic illnesses by sharing information from abroad, which is helpful for the policy maker of the government. And we could build a sound data system of medical record by combining the mature technology and platform from abroad.</p>

Demand Position or Project	the equipment system of flexible intelligent robot	Position Requirements or Project Introduction		Intelligent location system is designed to use the robot during the carrying, locking and downloading the man-made sand core to realize the flexible automatic production. By adopting the flexible grapping technology, we can avoid the damage of sand core during grapping process, thus we can not only raise the production rate, but also low the force of labor. By adopting the technology such as intelligent measurement and the three-dimension scanning and the workpiece with special shape location, in spite of the lack of accurate location during the putting materials process, we could be able to realize the accurate grapping , carrying, locking and downloading of sand core. With the integral core technique, the accordance requirement of the sand core would be lowered by using the floating tool holder which can compensate the big mistake of the gripped part of the sand core and the scale mistake during the gripping process.	
Task Description	By finish the programming of the models of the system software, we can integrate the software and hardware of the system at a first time. Then we could test the industrialization of one or two fields to confirm and adjust the relevant project and the data. After that, we could decide the optimized project and data by large scale regulation of the system and begin the design of standardization of all kinds of products.

Demand Position or Project	Modeling project of Wall CHB Series models		Position Requirements or Project Introduction	Design of China's own national car brand is relatively old and it can't catch up with the world trends and is at a distinct disadvantageous position in the national market. The total investment for the project of Wall CHB Series model is 8.62 million RMB. CHB Series models highlight the overall style of fashionable design, dynamic, simple and atmospheric characteristics. Through the project of CHB series modeling, we can improve the design ability of China's automotive industry, and to increase the product categories of China's own brand of high-end automotive car, enhance competitiveness of product and increase market share. Through the introduction of foreign advanced design, we can achieve synchronization with the international design standards and to increase market share with the "modeling management".	
Task Description	a. With respect to the modeling of the car, how to break the bottleneck of modeling to meet the market requirement of being young, fashionable and with a sense of modern technology. b. How to meet the design requirements of the Pan-European version regulations c. How to conduct the design of CHB series project with "modeling management" concept to meet the current requirement of the automotive market and meet engineering needs of the CHB modeling projects design.

Demand Position or Project	The manufacture of great horsepower tractor tubeless wheel		Position Requirements or Project Introduction	High-horsepower wheeled tractors has become the leader of agricultural products in the trend of China's agricultural mechanization. The market demand for high-power agricultural products rises rapidly, so farm machinery manufacturers extend the power of products in succession. The offline of the 300-horsepower tractor in batch currently ends the history that our country can't produce large horsepower tractor, breaks the pattern that all of products rely on import, therefore, this meets the needs for mechanized farming of large farms and large-scale land. However, the tubeless wheels requires by high horsepower tractor still rely on imports. We hope to invite experts to come and solve the bottleneck problem in process of manufacture, and this will lay a firm foundation for large-scale agricultural machinery in China.	
Task Description	<p>The key points of design and kev parameters of over-thickness roll rim calendar mould: the modification of the existing processing equipment for the improve of its processing range.</p> <p>The obiectives of this year:</p> <p>Through combine the large size rim mould' design and processing with the reform of the existing equipment. we need to solve the problem of the production of over-250 power tractor wheel .which can fill in the domestic blank. and therefore the production and export base of the high-power tractors and the harvester wheels.</p>

Demand Position or Project	High accuracy helical bevel gear project	Position Requirements or Project Introduction		Sumitomo Heavy Industries(Tangshan), Ltd is the only enterprise in Hebei that completely introduced the world's most advanced technology of Gear Cutting Machine- Gear Cutting Machine equipment of Klingelnberg GmbH. Helical bevel gear is first reduction of reduction gear, with fast revolving speed, and it has great influence on noise and machine life of reduction gear. It has great demand of precision and usually divided into five grades. After the project completed, the precision of the processed helical bevel gear will be grade four, which will totally fulfill the demand of the product. All of key equipments are imported, which include gear miller, gear grinding machine, gear lapping machine, gear measuring center from German Klingelnberg GmbH and turning center from Japanese Mori seiki, etc. Helical bevel gear will have batch production in early 2012, and it will be used for reduction gear produced by our enterprise. It will achieve design capacity in March, 2012.	
Task Description	1. The task of transformation and absorption of all technical documents for helical bevel gear will be completed in 2011. 2. All equipments' arrival, installation and check and acceptance will be completed. 3. Under the direction of experts from Japanese Sumitomo, our monthly output of high accuracy helical bevel gear will achieve 1000 pairs.
